SUMMARY ANALYSIS

REMOTE VIEWING (RV) SESSION LXI

1. (S) This report provides documentation of a remote viewing session conducted for training purposes to enhance a remote viewer's demonstrated ability.
2. (S) This remote viewing session was conducted without an interview. The remote viewer simply rendered his impressions of the target by drawing the images which came to his mind's eye. This remote viewer has had trouble with analytical overlay which may have been initiated through "left hemisphere" verbal communication. This session was an attempt to eliminate or reduce analytical overlay by eliminating the need to verbalize the remote viewer's impressions of the target. The remote viewer's drawings show some meaningful target correlation.
3. (S) The protocol used for this session was a modification of the protocol detailed in the document, Standard Remote-Viewing Protocol (Local Targets) by Harold E. Puthoff and Russell Targ, November 1978. This session's protocol was modified in that a randomly generated preselected target was not used. In lieu of a randomly generated, preselected target the "beacon" simply chose a site which, in his opinion, was unique and identifiable.
4. (S) At TAB A are drawings made by the remote viewer reference his impressions of the target site. At TAB B were photographs of the target site.
